Dev Full Stack SSR. at AFIP with 3 years of experience in Angular/VUE/JAVA.

My first serious project was the development of a web app for a company that distributes protein products, fat burners, recuperators, and others. The application allows you to carry information on orders, products, customers, vendors, stock, vendor commissions, and so on. I developed it using angular 11 and firebase.

My next work experience was for a government agency, where I participated on the front-end of an application to invoice sales in an agile way. I developed some screens using vue3.

Besides, in the same agency I'm currently participating in the development of a web app for inquiries and requests for procedures, regarding the issuance of receipts. I have developed several screens on the front-end using vue2 and I have developed a large part of the server side using Java 8.

I have 1 year of experience using Scrum, and 3 years using git/github/gitlab.

In this job I look for improve my skills and to learn the best practices in developing programs.

EXPERIENCE

AFIP – Administración Federal de Ingresos Públicos,

Habilitación de comprobantes— *January, 2022 - Present*

- Development of a web app for inquiries and requests for procedures, regarding the issuance of receipts.
